Reasons for Allowance

Regarding independent claim **1**, Meyer (US 6,768,980) teaches a method for transmitting at least one client signal, which has a first transmission bit rate (data rate, succeeding chunk, col. 18 lines 13-20) within a server signal which has a predetermined second transmission rate (data file), wherein the first and second transmission bit rates are different. Note, if the data rates of the chunks are different, then at least one chunk must have a data rate different from the data rate of the file.

Meyer teaches determining for at least one client signal, at least one identification number which indicates a relationship between the first and second transmission bit rates (data rate, succeeding chunk, col. 18 lines 13-20).

Meyer teaches inserting data in the at least one client signal into the server signal using the determined identification number (encapsulation, data rate, col. 18 lines 13-20).

However, nothing in the prior art of record teaches or fairly suggests inserting the client signal into the server signal **uniformly using sigma-delta modulation** in combination with all the other limitations of the claim.

Conclusion

Any comments considered necessary by the applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments of Statement of Reasons for Allowance."
